Missing engine.py file

Below is a **clear and structured list** of what you can add to your **AI Story & Script Generator using Streamlit + Ollama running LLaMA 3**.

I separated them into two groups:

- **Improvements** → Improve the existing system
- **Additional Features** → Completely new capabilities

1️⃣ Improvements (Enhancing Existing Functionality)

1. Error Handling

Currently if Ollama is not running, the app crashes.

Improve by:

- Handling API errors
- Showing user-friendly messages

Example message:

[redacted]

---

2. Loading Indicator

Story generation takes time.

Add a loading spinner.

Example:

[redacted]

This improves **user experience**.

---

3. Better Prompt Engineering

Improve the prompt sent to the AI.

Example improvement:

[redacted]

Better prompts = better stories.

---

4. Control Story Length

Add a length option.

Example:

[redacted]

---

5. Temperature Control

Allow user to control creativity.

Example slider:

[redacted]

---

6. Improve PDF Formatting

Current PDF is plain text.

Improve with:

- Title
- Genre
- Characters

- Date
- Page numbers

Example:

[redacted]

---

7. Better UI Design

Improve the interface in **Streamlit**.

Examples:

- sidebar for controls
- bigger text display
- color themes
- icons

---

8. Story Editing Option

Allow users to edit generated story before downloading.

Example:

[redacted]

Using:

[redacted]

---

9. Clear History Button

Allow user to clear story history.

Example:

[redacted]

---

10. Faster Generation

Improve performance by:

- limiting token length
- caching results

2️⃣ Additional Features (New Capabilities)

1. AI Image Generation

Generate an image for the story.

Example:

[redacted]

Tools:

- Stable Diffusion
- DALL-E

Result:

Story + poster image.

---

2. Voice Narration

Convert story into audio.

Example:

🔊 [redacted]

Libraries:

- gTTS
- pyttsx3

3. Multi-Language Story Generation

Allow stories in different languages.

Example:

[redacted]

4. Continue Story Button

Allow AI to continue the story.

Example:

[redacted]

The AI writes the next chapter.

5. Character Builder

User creates characters.

Example:

[redacted]

AI uses this information in the story.

6. Story Templates

Add template types.

Example:

[redacted]

---

7. Script Format for Movies

Generate proper screenplay format.

Example:

[redacted]

---

8. Story Rating System

AI evaluates the generated story.

Example:

[redacted]

---

9. Save Stories to Database

Store generated stories.

Possible databases:

- SQLite
- MongoDB
- Firebase

Users can revisit past stories.

---

10. User Login System

Add accounts for users.

Example:

[redacted]

Users can save their personal stories.

---

11. Export Multiple Formats

Currently only PDF.

Add:

[redacted]

---

12. Story Sharing

Allow users to share stories.

Example:

[redacted]

---

13. AI Story Collaboration

Multiple users can write a story together with AI.

Example:

[redacted]

---

14. Story Genre Recommendation

AI suggests genre based on user input.

Example:

[redacted]

---

15. Story Analytics

Analyze the generated story.

Example:

[redacted]

3️⃣ Advanced AI Features (Very Powerful)

These make your project look **very advanced**.

AI Plot Generator

Generate a complete plot structure.

[redacted]

AI Character Emotion Detection

Analyze emotions in story.

Example:

[redacted]

AI Story Illustration

Automatically generate illustrations for scenes.

AI Storyboard Generator

Convert story into movie storyboard scenes.

4️⃣ Example Future Version of Your App

Final system could become:

[redacted]

Features:

[redacted]

This becomes a **very strong portfolio project for AI / GenAI roles**.

✅ If you want, I can also show **the top 15 features that would make this project look like a real AI startup product (very impressive for MCA viva or interviews).**
